

# PLATINUM CERAMIC *PAIN*T PROTECTION

Better than Traditional Wax & Sealants

**PLATINUM SHIELD**  
PROTECTION 

# PLATINUM CERAMIC PAINT PROTECTION

TRADITIONAL WAXES & SEALANTS  
will do the trick, but there is something even BETTER!

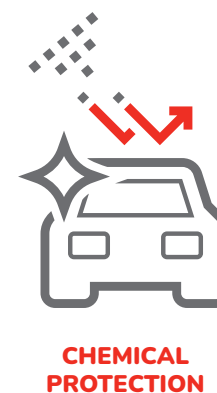

## Better Investment

Platinum Ceramic Paint Protection is a “one and done” coating. The clear, liquid coating is applied by hand, with no need for boosters or reapplications. This gives your clear coat the protection it needs!

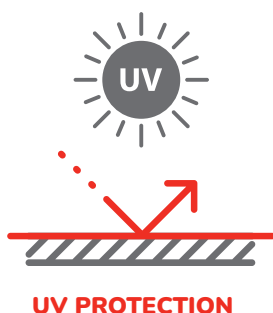

## Better Chemical Protection

Platinum Ceramic Paint Protection prevents paint from fading or peeling away because it permanently bonds to the factory clear coat, becoming one single layer. Advanced nanotechnology mixed with the properties of Graphene make this coating the perfect product for the automotive industry. Graphene infused technology that hardens into graphene sheets creating the ultimate protection for paintwork.

## Better UV Protection

Platinum Ceramic Paint Protection completely seals your vehicle's paint, shielding it from the sun's harmful UV rays. The ceramic coating protects it from fading and even oxidation.

## Better Finish

Platinum Ceramic Paint Protection enhances the clear coat's smooth finish. Dirt and grime will find it challenging to stick to the paint, making it easier to clean while leaving a glossier finish.

*Repair or replacement costs will be covered if there is excessive discoloration, fading, or oxidation caused by the sun or road salt. Upgrade to the Environmental Paint Guarantee to protect against damage caused by acid rain, tree sap, and bird droppings.*
